CANADA IN THE WORLD

EXHIBITION

Museum of Prime Minister Jean Chrétien at Shawinigan Space

Shawinigan, Québec, Canada, 2012

The *Canada in the World* exhibition showcases the gifts given to the Right Honourable Jean Chrétien by various Heads of State while he was Canada's Prime Minister.

This multimedia exhibition uses touch-sensitive display technology that engages a very broad public, including elementary and secondary students who generally show little interest in traditional museum displays.

Description

XYZ Cultural Technology designed, installed and programmed audiovisual systems that automatically start up every day from a user interface that is accessible and easy for the museum's staff to use.

La Cité de l'énergie has been a client of XYZ's since 2007. XYZ's team of experts looks after all of their museum projects.
