SOUND AMBIENCE ON THE SQUARE

OUTDOOR SOUND SYSTEM

Place Jean-Béliveau

Quebec, Canada, 2017

Place Jean-Béliveau, adjacent to the Videotron Center in Quebec City, is an urban space of 15,000² meters that makes it possible for events of all kinds to happen. Named to honor the famous hockey player, it is a unique gathering place in the city and a welcoming area for anyone visiting the amphitheatre. In winter, an ice rink is set up, for the pleasure of all, young and old who indulge in free skating. In summer, festivals and water games are organized. The XYZ team was mandated to install four-season outdoor sound equipment to add to the ambience of the venue.

Description

XYZ experts have installed an outdoor sound solution consisting of four directional beam speakers, which provide extensive but accurate coverage of the whole Jean-Béliveau Place.
