MODERN TERMINAL

VIDEO SIGNAGE

Quebec's International Airport

Quebec, Canada, 2017

Quebec's Jean Lesage International Airport has undergone major renovations in recent years to double its surface area and reach a capacity of two million passengers by 2020. At the end of 2017, a new modern terminal has opened. It brings together the departure and arrival halls, the search points, the waiting areas, the baggage claim room and the commercial area under one roof. The team at XYZ Cultural Technology ensured the integration of all video signage throughout the terminal.

Description

In all, nearly 60 video signage screens 42'' to 84', were integrated across the six zones of the new terminal at Jean Lesage International Airport in Quebec City. The team has designed and manufactured custom-made supports that ensure perfect integration with the building's architecture.

XYZ will provide video signage during the second phase of the airport redesigning.
